Hermann Ebbinghaus (1850-1909) foi um psicólogo alemão pioneiro no estudo experimental da memória e é conhecido por sua descoberta da curva de esquecimento e do efeito de espaçamento.

Ele também foi a primeira pessoa a descrever a curva de aprendizado.

Ebbinghaus também descobriu um padrão inesperado na retenção de memória. Ele descobriu que normalmente há uma perda muito rápida de recall na primeira hora, seguida por uma perda um pouco mais lenta, de modo que, após nove horas, cerca de 60% é esquecido. Após 24 horas, cerca de dois terços de tudo o que foi memorizado é esquecido.

Remember Anything

From images to scientific markup, Anki has got you covered.

Remember Anywhere

Review on Windows, Mac, Linux, iOS, Android, and any device with a web browser.

Remember Efficiently

Only practice the material that you're about to forget.

About Anki

Anki is a program which makes remembering things easy. Because it's a lot more efficient than traditional study methods, you can either greatly decrease your time spent studying, or greatly increase the amount you learn.

Anyone who needs to remember things in their daily life can benefit from Anki. Since it is content-agnostic and supports images, audio, videos and scientific markup (via LaTeX), the possibilities are endless.

For example:

- Learning a language
- Studying for medical and law exams

"The single biggest change that Anki brings about is that it means memory is no longer a haphazard event, to be left to chance. Rather, it guarantees I will remember something, with minimal effort. That is, *Anki makes memory a choice.*"

— Michael A. Nielsen, "Augmenting Long-term Memory"
